

VU Institute of Mathematics and Informatics Annual Report 2010

Akademijos str. 4, LT-08663 Vilnius, Lithuania

Tel. (+370 5) 2109 300, fax (+370 5) 2729209

E-mail: info@mii.vu.lt

WWW: <http://www.mii.lt>

Director – Prof. Habil. Dr. *Gintautas Dzemyda*

STAFF – 86 research fellows (24 habilitated doctors and 51 doctors), 69 doctoral students.

Main research trends of the Institute

Doctoral Dissertations maintained in 2010

Conferences and Seminars organised in 2010

INFORMATICS METHODOLOGY DEPARTMENT

NUMERICAL ANALYSIS DEPARTMENT

PROBABILITY THEORY AND STATISTICS DEPARTMENT

RECOGNITION PROCESSES DEPARTMENT

SOFTWARE ENGINEERING DEPARTMENT

MATHEMATICAL LOGIC SECTOR of the SED

STOCHASTIC PROCESSES DEPARTMENT

SYSTEMS ANALYSIS DEPARTMENT

OPERATIONAL RESEARCH SECTOR of the SAD

MAIN RESEARCH TRENDS OF THE INSTITUTE

Probability Theory and Mathematical Statistics; Finance and Actuarial Mathematics; Differential Equations and Numerical Methods for their Solution; Mathematical Logic and Algorithm Theory;

Recognition Processes, Data Analysis, Multi-Modal Optimization Problems, Multimedia Technologies and Interactive Systems, Software Engineering;

Theoretical and Methodical Fundamentals of Informatics, Information and Communication Technology (ICT) in Education, Computer Networks and Software Engineering Methods and Applications in the Creation of New Information Technologies.

DOCTORAL DISSERTATIONS MAINTAINED IN 2010

Jūratė Skūpienė “[Evaluation of Algorithm-Code Complexes in Informatics Contests](#)”;

Remigijus Paulavičius “[Global Optimization with Simplicial Partitions](#)”;

Virginijus Marcinkevičius “[Investigation and Functionality Improvement of Nonlinear Multidimensional Data Projection Methods](#)”;
Rasa Karbauskaitė “[Analysis of Multidimensional Data Visualization Methods That Preservethe Local Structure](#)”;
Povilas Treigys “[Development and Application of Methods in the Graphical Ophthalmological and Thermovisual Data Analysis](#)”;
Vaidas Giedrimas “[The Component Based Software Generation Method](#)”;
Živilė Jesevičiūtė “[The Eigenvalue Problem for Differential Operator with Nonlocal Integral Conditions](#)”;
Aleksej Bakšajev “[Statistical Tests Based on N-Distances](#)”;
Daiva Šveikauskienė “[Automatic Syntactic Analysis of Lithuanian Simple Sentences](#)”;
Sergėjus Ivanikovas “[The Problems of Parallel Computing in Multidimensional Data Visualization](#)”.

CONFERENCES AND SEMINARS ORGANIZED IN 2010

[15th International Conference “Mathematical Modelling and Analysis”](#),
May 26–29, 2010, Druskininkai, Lithuania;

[26th Conference of Trans-European Research and Education Networking Association “TNC2010 – Terena Networking Conference 2010”](#),
May 31–June 3, 2010, Vilnius;

[10th International Vilnius Conference on Probability Theory and Mathematical Statistics](#),
June 28–July 2, 2010, Vilnius;

[Workshop on Survey Sampling Theory and Methodology](#),
August 23–27, 2010, Vilnius;

[9th Joint Conference on Knowledge-Based Software Engineering \(JCKBSE'10\)](#),
August 25–27, 2010, Kaunas, Lithuania;

[International Conference “Learning community for Web 2.0 teaching”](#),
October 1–5, 2010, Vilnius;

[2nd Workshop ‘Data analysis methods for software systems’](#),
December 2–4, 2010, Druskininkai, Lithuania.

INFORMATICS METHODOLOGY DEPARTMENT

Akademijos 4, LT-08663 Vilnius
Tel. 2109732 fax 2729209
E-mail valentina.dagiene@mii.vu.lt
Head – Prof. Dr. Valentina Dagienė

Principal researchers:

1. Prof. Habil. Dr. Valentina Dagienė,

Researchers:

1. Dr. Tatjana Jevsikova,
2. Dr. Jevgenij Kurilov,

Assistant researchers:

1. Viktoras Dagys,
2. Sirvydas Dagys,
3. Ieva Jonaitytė,
4. Sigita Pedzevičienė,

Specialists:

1. Jūratė Skūpienė,

Technical assistants:

1. Remigijus Andžius,
2. Martynas Budriūnas,
3. Gabrielė Daukšaitė,
4. Antanas Grincevičius,
5. Arvydas Purvinš,
6. Giedrė Svetikiienė,
7. Rimantas Žakauskas,

Doctoral students:

1. Eglė Jasutė,
2. Anita Juškevičienė,
3. Svetlana Kubilinskienė,
4. Silvija Sėrikovienė,
5. Bronius Skūpas,
6. Jūratė Urbanienė,
7. Lina Zajančkauskienė,
8. Inga Žilinskienė.

RESEARCH INTERESTS

Localization of digital resources, models of quality evaluation of educational system components, teaching programming and informatics

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget

Theme: Research on specification, localization and evaluation of educational digital resources and electronics services

Main results: 1) analysis of peculiarities of localizing digital resources, 2) development of methods and models for evaluation of the quality of education system components, 3) derivation of basic informatics concepts and proof their appropriateness to use in contests

Governmental Science Programmes and Research Projects Ordered by the Branch Ministries

Science for business and society (Mokslo verslui ir visuomenei). Agreement Nr. S-VP2-1.4-ŪM-03-K-01-019. 2009-11-02–2011-10-31. Prof. V. Dagienė

Ordered Research Projects

Development and revision of data of the Term Bank of the Republic of Lithuania. Agreement Nr. VP-6/2008. 2009-01-01–2010-12-31. S. Meškauskienė

International Science Programmes and Projects

te@ch.us - Learning community for Web 2.0 teaching.
Ref. Nr. 504333-LLP-1-2009-1-DE-COMENIUS-CMP. 2009–2011. Prof. V. Dagienė
Nordic Network for Engineering Education Research (NNEER). 2009–2012. Prof. V. Dagienė

COOPERATION

Aalto university (Finland): V. Dagienė has Special course in computing education research for doctoral students (T-106.6500)

Davidson Institute of Science Education, Weizmann Institute of Science
University of Eastern Finland of Joensuu and Kuopio

OTHER SCIENTIFIC ACTIVITIES

V. Dagienė (<http://ims.mii.lt/valentina/en/index.htm>)

- Editor-in-Chief of two international journals “Informatics in Education” (since 2002) and “Olympiads in Informatics”
- Member of ESF Standing Committee for the Physical and Engineering Sciences – PESC in 2009-2013
- Expert of EU Eurostars Programme
- Representative of Lithuania in Education Committee TC3 under the International Federation for Information Processing (IFIP)
- Vice chair of the Technical Committee of IFIP for Education (TC3)
- Member of Steering Committee of International Olympiads in Informatics

E. Kurilovas

- Member of Steering Committee of European Schoolnet (or EUN, the network of 31 European Ministries of Education)
- Member of Lithuanian national CEDEFOP and ReferNet Committees
- Expert-evaluator: PHARE, Leonardo da Vinci, eContentplus programmes, European Regional Development Fund
- Expert on preparation of feasibility studies and project documentation: European Commission, Ministry of Education and Science of Lithuania, Central Project Management Agency under the Ministry of Finance of Lithuania

Head – Dr. Artūras Štikonas

STAFF

Principal researchers:

Prof. Dr. Vytautas KLEIZA (part-time),
Prof. Habil. Dr. Antanas LAURINČIKAS (part-time),
Prof. Habil. Dr. Konstantinas PILECKAS (part-time),
Prof. Dr. Stasys RUTKAUSKAS,
Prof. Habil. Dr. Mifodijus SAPAGOVAS,
Assoc. Prof. Dr. Artūras ŠTIKONAS

Senior researchers: Olga ŠTIKONIENĖ

Technical assistants: Agnė SKUČAITĖ

Doctoral students:

Justina JACHIMAVIČIENĖ, Kristina JAKUBĖLIENĖ, Mažvydas MACKEVIČIUS,
Svetlana ROMAN, Igor SABUROV, Kristina ALDOŠINA, Aidas BALČIŪNAS,
Laura LUKŠAITĖ-BALAKAUSKIENĖ, Jevgenija PAVLOVA, Santa RAČKAUSKIENĖ

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget:

1. Differential problems with nonlocal boundary conditions and numerical methods of their realization. Prof. M. Sapagovas, Assoc. Prof. A. Štikonas, 2008-2010

ADI method for a two dimensional Poisson equation in a rectangle domain with a weighted integral boundary condition in one coordinate direction was considered. Sufficient conditions of stability for ADI method were investigated. A third-order linear differential equation with three additional conditions was analysed. Two Green's functions for two such problems with different additional conditions were compared. A Sturm-Liouville problem with one classical first type boundary condition and other nonlocal integral boundary condition was considered. Complex eigenvalues of these problems were investigated.

2. Boundary value problems of systems of degenerate elliptic equations and the Navier-Stokes systems in the domains of complicated geometry, Prof. S. Rutkauskas, 2009-2011

System of linear second-order ODEs with an irregular singular point are considered. The matrix that relates to the equation of this system is nonnormal. That implies some complications with respect to the statement of the weighted boundary-value condition at the singular point. A well-posed weighted boundary-value problem to the considered system of ODEs was proposed and the existence and uniqueness of its solution was proven.

Projects, Programmes, Issues Supported by Lithuanian State Science and Studies Foundation

Olga Štikonienė: Development of Bioelectrocatalysis for Synthesis and Analysis. Prof. F. Ivanauskas. 2008-2010. (**BIOSA**)" Nr. N-08007.

The behaviour of the electrochemical glucose biosensor based on the glucose oxidase was examined in the diffusion and the kinetic modes of the action. The sensitivity and linearity of the biosensor can be monitored changing the permeability of the outer membrane of the biosensor. The mathematical model based on the enzymatic conversion of the substrate and the diffusion of the substrate was created. The influence of the fluctuations of the membrane thickness, the diffusion coefficients and pH were modelled and their impact was evaluated at different modes of an action of the biosensor.

RESEARCH INTERESTS

Limit theorems for weakly dependent random variables, vectors and random fields
(J. Sunklodas)

Rates of Convergence, Second Degree Polynomials, U-statistics, Estimations of the Parameters of Stable Laws, Diophantine Approximations, Estimations of Stability of Characterization (O. Januškevičienė).

Extremal problems in measures and functions theory (S. Norvidas).

Nonparametric and adaptive statistical methods, analysis of high-dimensional data and sparse categorical data, cluster analysis, applications in biostatistics and econometrics (M. Radavičius).

Statistical estimations of distributions, classification, applications of statistical methods in macroeconomical analysis (R. Rudzkis).

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget:

1. Statistical properties of complex random systems. Prof. V. Bentkus (till 2010 06 03), Prof. J.K. Sunklodas (since 2010 06 03). 2010–2012.

Tail probabilities of sums of Bernoulli random variables have been investigated (D. Dzindzalieta).

A general maximal integral concentration problem has been considered (A. Grigelionis, S. Norvidas).

Bandlimited signals have been approximated by signals of finite lattice spectrum (A. Grigelionis, S. Norvidas).

Asymtotic rate of convergence in some kinds of U-statistics of second order were investigated. In view of the equality of eigenvalues and some moment conditions, it was proved that the limit distribution of the second-order U-statistic possesses the property of stability in the sense that it is independent of the distribution of the initial random variable X (O. Januškevičienė).

So called DPR type estimators for the tail index estimation were investigated. A new class of such estimators proposed. Asymptotic properties (including asymptotic of the bias and

asymptotic normality) of the new estimators are obtained. (V. Paulauskas with M. Vaiciulis). Strong law of large numbers for sums of linear random fields is proved (V. Paulauskas).

The optimal estimate of a smooth metric in the central limit theorem has been obtained for Fi-mixed random variables where the Fi-mixing coefficient is defined between 'past' and 'future' (J. Sunklodas).

Inequalities for the stop-loss premium have been obtained in the case of unimodal risks which are stochastically dominated by given random variables (M. Šileikis).

2. Development of composite algorithms of multivariate statistics and their applications in econometrics and biometrics. Prof. R. Rudzkis. 2008–2010.

An estimator, based on semiparametric model, of total of a variable in finite population is proposed (D. Krapavickaitė).

In finite population setting , calibrated estimators of several types for covariance are constructed and their efficiency is compared by simulation (A. Plikusas).

Tests for sparse contingency tables based on their profile statistics are proposed (M. Radavičius).

Projects, Programmes, Issues Supported by Lithuanian State Science and Studies Foundation

The project „Concentration of measures and functions“ supported by the Research Council of Lithuania (adv. S. Norvidas).

International Science Programmes and Projects

V. Bentkus, D. Dzindzlieta and S. Norvidas were invited as guests to Bielefeld university Collaborative Research Centre „Spectral Structures and Topological Methods in Mathematics”.

RESEARCH INTERESTS

Random processes recognition.

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget

Recognition System Synthesis for Signals with Complex structure.

The theory and constructive methods for recognition of short-time specific random elements that may emerge in the background of random sequences are expounded. The results of experimental investigations are presented. Detection extrasystoles in heart rate sequences is investigated. Decision making is based on short-term specific random elements in random sequences recognition theory. Three types of extrasystoles are detected: extrasystoles with a noncompensatory post-extrasystolic pause, extrasystoles with a compensatory post-extrasystolic pause, and interpolated extrasystoles. The decision opens the possibility to develop wearable, green – energy saving equipment for long term heart rate variability monitoring of freely moving people.

Recognition of isolated words supported by optimized formante features is investigated.

Investigations and applications of the dynamical system identification and control algorithms

An efficient method for computation of the characteristics of the multivariate systems has been proposed, and the analysis of the modern power spectrum estimation methods has been performed.

The robust approach and its technique for parametric identification and control of the closed-loop adaptive system with time-varying parameters has been proposed.

International Science Programmes and Projects

ADHER project supported by European Union in Lifelong Learning program GRUNDTVIG Mobility Partnership, duration 2009-2011.

ADHER (Adopt Your Heritage), Agreement Nr LLP-GRU-MP-2009-LT-00008, project coordinated by ATAKUM Halk Egitim Merkezi ve Aksam Sanat Okulu, Turkey. Partners in Lithuania, Italy, Slovenia, Romania, Greece.

Proof theory of non-classical logics

Automated deduction

Decision procedures

Boolean function complexity

Lower bounds

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget

Efficient proof methods for logics of knowledge; graphic structure and complexity of logic functions. Assoc. Prof. Habil. Dr. R. Pliuškevičius, 2009-2011.

The scientific research were realized in two areas: (1) automated reasoning in logic of knowledge and (2) complexity of Boolean function .

In the first area, two problems has been investigated: (a) elimination of searching of periodicity and (b) specialization of backtracking in process of derivation. In the point (a) a new method to determine termination of derivation and to eliminate loop check for transitive and reflexive modal logics was presented. In the point (b) effective strategies allowing to restrict backtracking in derivatios were described.

In the second area, an optimal lower bound of n^3 on the number of wires in a depth-2 circuit computing the product of two n-by-n Boolean matrices over GF(2) was obtained. It was also shown that linear operators can be computed much more efficiently using non-linear gates. Finally, it was shown that the classical Khrapchenko's lower bound on the formula size cannot be improved using convex complexity measures.

Ordered Research Projects

Deutsche Forschungsgemeinschaft (DFG) grant SCHN 503/5-1: Limits of algorithmic paradigms. Prof. S. Jukna, 2010-1013.

RESEARCH INTERESTS inference for long memory processes, modeling financial data, long range dependence, heavy tails, aggregation, self-similar processes, Levy processes, rough paths, concrete functional calculus, stochastic partial differential equations, random Hamiltonians, MV-algebras .

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget

1. Stochastic Equations for Random Processes and Fields. Prof. B. Grigelionis, prof. H. Pragarauskas. 2008-2010.

For solutions of stochastic differential equations driven by fractional Brownian motion, asymptotic properties and consistency rates of the Gladyshev estimate of the Hurst index were obtained. Necessary and sufficient conditions of self-decomposability of the Hougaard subordinated Gauss-Levy processes were found and related Ornstein-Uhlenbeck processes were described.

2. Modeling of financial returns and statistical inferences. Prof. D. Surgailis. 2008-2010.

Contemporaneous aggregation of the LARCH model was studied .It was proved that the squared aggregated process exhibits long memory and their partial sums converge to a self-similar process of a new type. A two-sample test for comparison of long memory parameters based on ratios of two rescaled variance statistics was constructed. The two samples have the same length and can be mutually independent or dependent. In the latter case, the test statistic is modified to make it asymptotically free of the long-run correlation coefficient between the samples.

Projects, Programmes, Issues Supported by Lithuanian State Science and Studies Foundation

Project: Calculus of rough functions and applications in econometrics. Prof. R. Norvaiša, 2010-2011.

Project: The monograph „Large Sample Inference for Long Memory Processes“. Authors: L. Giraitis, H.L. Koul and D. Surgailis. 2009-2010.

RESEARCH INTERESTS

Medical data analysis and decision support; Data mining; Visualization of complex multidimensional data; Multiple criteria decision support systems; Statistical analysis of

multidimensional data using neural networks; Parallel computing; Global optimization methods; Local optimization methods; Creation and computational realization of complex simulation models in epidemiology, state education and state energy supply systems and of various other origin with uncertainty; Optimal control applications.

RESEARCH PROJECTS CARRIED OUT IN 2010

Projects Supported by University Budget 450 simbolių

Project title: „Decisions in optimization, modelling and visualization problems“.

Main results:

1. A method is proposed for analysing the thermovision-based video data that characterize the dynamics of temperature anisotropy of the heart tissue in a spatial domain.
2. A new algorithm is proposed for selecting a regularization parameter of a local Gram matrix for the locally linear embedding applied to the visualization of multidimensional data.
3. The equivalence of two widely used global optimization models is shown.
4. New statistical model based global optimization algorithms are proposed and researched.
5. New optimization models of financial markets, mechanical systems, and school scheduling.
6. Global optimization algorithms with modified interval arithmetic and simplicial partitions have been proposed and investigated.
7. Stated and proven case of neural networks free energy function of an existence of the global minimum instead a saddle point.

Projects, Programmes, Issues Supported by Lithuanian State Science and Studies Foundation

1. Project „Liquidity analysis in order to reduce investment costs in the stock markets“. Contract No. MIP-20/2010. Dr. A. Raudys. 2010-2011.
2. Project „Global optimization algorithms with simplicial partitions“. Contract No. MIP-108/2010. Dr. (HP) J. Žilinskas. 2010-2011.
3. Project „Intersection graph structure analysis“. Contract No. MIP-52/2010. Habil. dr. M. Bloznelis. 2010.

Governmental Science Programmes and Research Projects Ordered by the Branch Ministries

1. Innovation cheque of Ministry of Economy „Algorithm for optimization of route among N points and algorithm for fixation of mean and deviation in vehicle fuel level (fuel filling/pouring out)“. Contract No. 31V-79. 2010

Ordered Research Projects (pateikiamas vykdomų užsakomujų darbų sąrašas (Lietuvos ir užsienio užsakovai))

1. Project „Investigation of the algorithms for extraction and graphical presentation of critical physiological parameters from sensor signals“. Contract No. AS10-012. 2010

International Science Programmes and Projects

1. COST action „Open European Network for High Performance Computing on Complex Environments“. Contract No. IC0805. Dr. (HP) J. Žilinskas. 2009-2013.
2. COST action „Combining Soft Computing Techniques and Statistical Methods to Improve Data Analysis Solutions“. Contract No. IC0702. Dr. O. Kurasova. 2008-2012.
3. COST action „Algorithmic Decision Theory“. Contract No. IC0602. Prof. habil. dr. A. Žilinskas. 2007-2011.

4. LLP Erasmus Thematic Networks programme "Teaching, Research, Innovation in Computing Education. Project number 142399-LLP-1-2008-1-BG-ERASMUS-ENM. Agreement No. 2008-3258/001-001. Prof. habil. dr. A. Žilinskas. 2008-2011

RESEARCH INTERESTS

Operational Research, Queueing theory, Stochastic Optimization

RESEARCH PROJECTS CARRIED OUT IN 2010**Projects Supported by University Budget**

Application of knowledge-based technologies to monitoring, analysis and design of information networks

Wide spread of information networks becomes the engine for development of modern technologies. Computers in information networks generate enormous amounts of data, discovery and extraction of knowledge from which is an important tool for gaining concurrence abilities in the modern dynamic environment of research and business. Exploration and control problems of information networks that are the most complicated work, created by human mind and hands, are often solved by approaching the methods of data analysis (data mining) and queuing theory. However latter methods might be also successfully

applied in many analysis and decision tasks, which occur in networks, existing in wide spectrum of business and social systems. Research focusses on following tasks aiming to main goals of the theme:

1. Network monitoring in on-line mode.
2. Queuing methods for network control and design
3. Search engine optimization
4. Open source technologies
